

CONNECTIVITY MADE SIMPLE

## Instant Connectivity

Quant has been designed for users to collaborate, assign and delegate tasks instantly.

The unique capabilities of the software allows users to view and share applications, as well as interact and make changes to the original source file.

Quant does not require the cloud for the real-time connectivity and collaboration.

## Working collaboratively has never been simpler

Quant enables you to share numerous application windows with other peers within a group, including those running video walls.

The software allows simultaneous interactivity with the same application by multiple users.

Any changes will be synchronised instantly, meaning updates are seen as they happen.

Users can view and edit files, without the need to have the programs installed on their local computer.

**User A** is the application owner

## Ideal for a wide range of sectors

Quant is perfect for connecting people through shared application windows. From business to industrial environments, typical sectors where Quant could be used include:

Business Collaboration

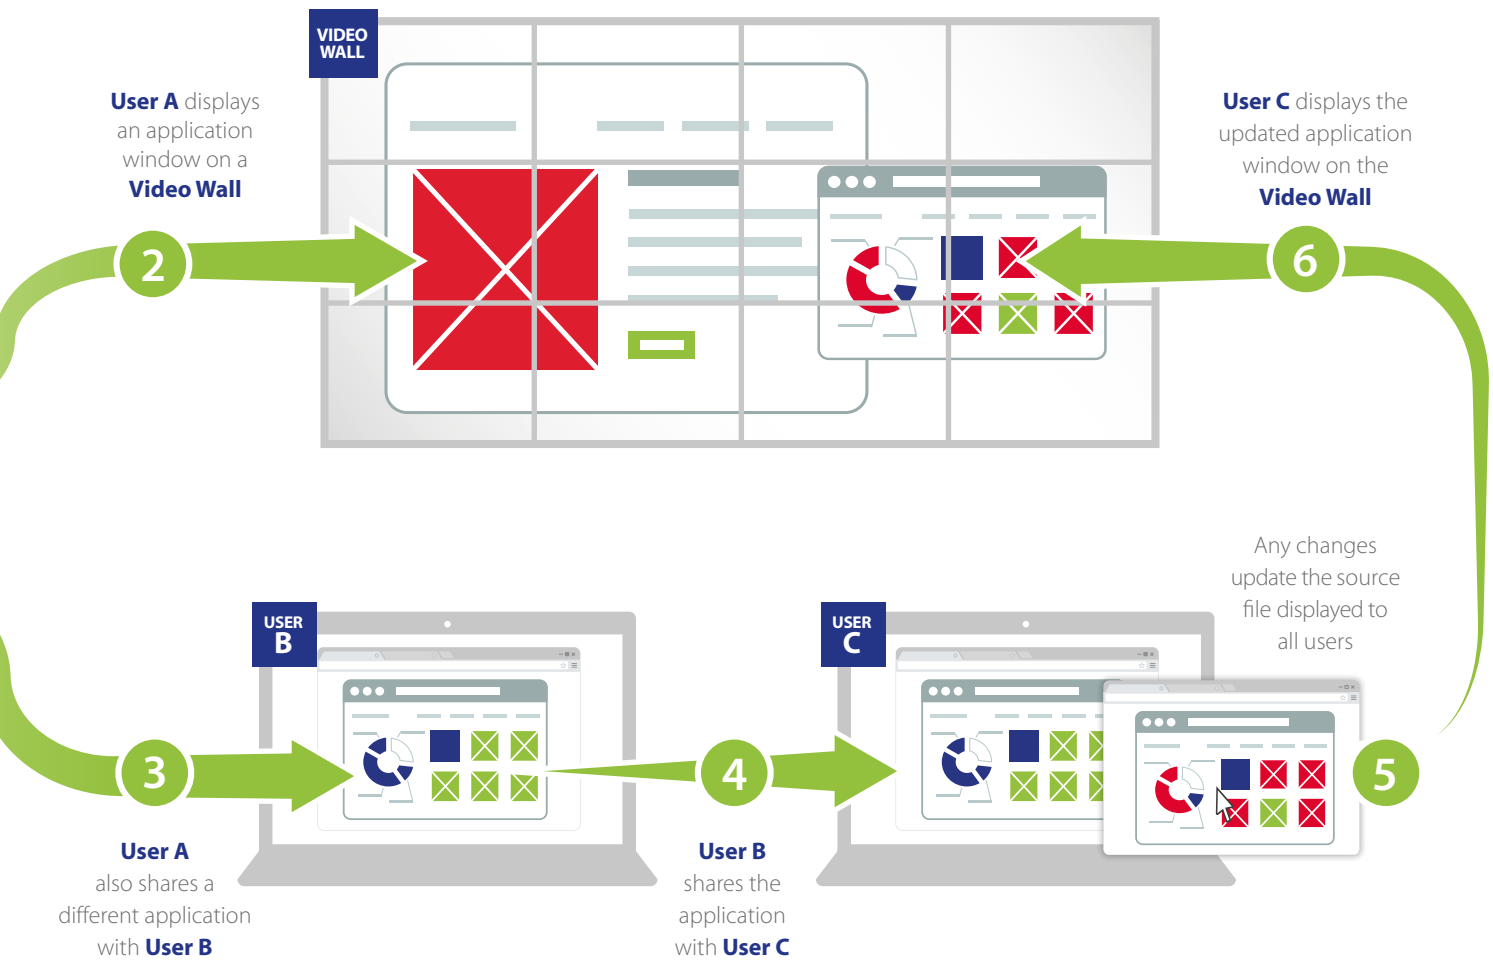

Traffic Management Centres

Quant contains patented and patent pending technology

# How it works

Quant provides an application owner full control to decide what to share, with whom to share and what permissions are given. Application windows can be simply dragged and dropped between peers or onto a video wall.

Manufacturing Process Control

Utility Service Operations

Security Suites

## Summary:

- Instantly connect with peers
- Share application windows using simple drag and drop functionality
- Simultaneously interact with multiple users
- Synchronise applications Instantly
