Mitsubishi Electric highlights new surveillance systems at IFSEC 2015

Mitsubishi Electric will showcase several recently introduced products at IFSEC 2015, including an advanced range of digital security cameras and a new generation of compact control room displays designed for ultra-reliability and zero maintenance.

Mitsubishi Electric is one of the top global vendors of surveillance systems, supplying cameras and digital video recorders in a wide variety of applications, from retail security to the monitoring of factory production lines. Mitsubishi's latest digital CCTV system consists of a new advanced network video recorder (NVR), the 5000 Series, and its 7000 Series network camera range that includes indoor box and dome types, and an IP66-rated outdoor unit. All cameras in the 7000 Series offer Full HD resolution H.264 video over IP and exceptional dynamic range, enabling extremely sharp images to be obtained even in difficult lighting conditions. When used in conjunction with the 5000 Series NVR, advanced processing techniques deliver a strikingly high image quality, allowing useable evidence to be obtained even when the subject is strongly backlit or moving rapidly. The 5000 Series NVR can power up to 16 7000 Series cameras over the network (PoE), expandable up to 32.

Complementing its CCTV systems, Mitsubishi Electric will also introduce its latest control room display systems at IFSEC 2015. Based on Mitsubishi's market-leading DLP rear projection technology, its new HS12 "slim cube" offers Full HD performance in a compact, front-access format that allows it to be installed in smaller control rooms than would normally be possible. DLP technology delivers superior performance to LCD as its seamless screen surface is capable of displaying even static content continuously 24/7 with no ill-effects due to image sticking. Mitsubishi Electric's unique air-cooled LED projection engine is rated for 50,000 hrs (over 5.5 years) continuous operation and requires no maintenance.

Alongside the HS12 projection video wall, Mitsubishi will also feature its high-specification 55" LCD tiled display, the LM55P1, which is ideal for less demanding applications in small suites or breakout rooms. Other products from Mitsubishi include its high-end control room DLP displays, the 120 Series and Seventy Series, over 71,000 of which have been installed world-wide.

All Mitsubishi Electric displays are built to extremely high standards and have a proven pedigree in mission-critical applications all over the world.

IFSEC 2015 opens at London's ExCel centre from June 16th to 18th. Mitsubishi Electric can be found on stand D310.
