Control Room Technology Workshop visits Belgrade

The Control Room Technology Workshop continues its tour of European cities with new events scheduled for March 20th and 21st 2018, in Belgrade, Serbia.

The popular workshops are the result of a unique collaboration between control room technology specialists Mitsubishi Electric, Adder and Saifor. Belgrade, presented in collaboration with leading Serbian systems integrator, Division Visual Solutions, will be the fifth city to host the workshops following previous successful events in Warsaw, Frankfurt, Stockholm and Rome.

The two, one-day workshops allow delegates from a wide variety of industries to benefit from a comprehensive overview of contemporary control room technology and design, with each of the participating companies giving their unique perspective on both the engineering and operational issues involved, from display technology, processing and control, through to ergonomics and workspace design. The Workshop is designed for system integrators, non-specialist centre managers and end-users, taking them through a basic understanding of the issues and how to address them, before discussing real-world case studies and finally providing the opportunity to get hands-on with the technology themselves.

Peter van Dijk of Mitsubishi Electric comments, "The Control Room Technology Workshops are designed to bring delegates very quickly up to speed with the latest developments in control room design; familiarizing them with the technology and terminology, and equipping them with the knowledge they need to make informed choices when it comes to managing or specifying control room installations.

Peter van Dijk of Mitsubishi Electric comments, "The Control Room Technology Workshops are designed to bring delegates very quickly up to speed with the latest developments in control room design; familiarizing them with the technology and terminology, and equipping them with the knowledge they need to make informed choices when it comes to managing or specifying control room installations.

"Furthermore, the Workshops provide an excellent opportunity to network and forge relationships with fellow professionals working in the command and control field, which can provide a valuable ongoing source of expertise and support."

The Control Room Technology Workshops will be held at Hotel ZIRA, Belgrade, Serbia on March the 20th and 21st 2018. Attendance is free. More information and registration is available online at <http://www.controlroomtechnology.com/>
